

ANTHROPIC

# Anthropic & AWS: Enterprise AI at scale

In today's rapidly evolving AI landscape, enterprises need more than just powerful models—they need comprehensive, secure, and scalable solutions. The strategic collaboration between Anthropic and Amazon Web Services (AWS) delivers exactly that, combining Claude's state-of-the-art AI capabilities with AWS's enterprise-grade infrastructure through Amazon Bedrock.

## Setting the Standard in Enterprise Security

Security remains paramount for enterprise AI deployment. Anthropic and AWS deliver a security framework exceeding industry standards, housing both models and data within the same Virtual Private Cloud. This architecture ensures maximum protection for sensitive enterprise data. Global compliance support—including HIPAA, SOC, ISO, and CSA—makes the solution suitable for even the most regulated industries. Anthropic's commitment to model safety provides superior protection against manipulation and unauthorized data extraction while maintaining a strict policy of never training on customer data. It's [what allows](#) Intuit TurboTax to protect user tax data while scaling to serve millions of customers via Claude in Bedrock.

## Comprehensive Integration for Enterprise Success

Through Amazon Bedrock, enterprises gain immediate access to Claude's advanced capabilities alongside essential features like Knowledge Bases, Agents, and Guardrails. As the only cloud provider currently offering fine-tuning capabilities, AWS enables organizations to customize Claude for their specific enterprise needs while maintaining the highest standards of performance and security. This deep integration extends across AWS's complete artificial intelligence and machine learning ecosystem.

## Enterprise Success in Action

This collaboration is reshaping industries and accelerating innovation across sectors. Novo Nordisk, a global healthcare leader, has revolutionized their drug approval process using Claude through Amazon Bedrock. By developing NovoScribe, their pioneering generative AI solution, they've transformed the creation of Clinical Study Reports from a 12-week process to just 10 minutes—potentially accelerating medicine availability to patients and generating up to \$15 million in additional daily revenue through earlier market entry.

Similarly, Zendesk has revolutionized customer experience delivery by integrating Claude through Amazon Bedrock. "AI is transforming customer and employee interactions, and soon, it will shape virtually all of them," said Zendesk CTO Adrian McDermott. The results speak for themselves: more empathetic customer interactions, enhanced personalization, and significantly improved agent efficiency through intelligent automation.

## Begin Your Enterprise AI Journey

Transform your enterprise with leading AI capabilities backed by world-class infrastructure. Connect with your Anthropic × AWS account team or visit [aws.amazon.com/bedrock](https://aws.amazon.com/bedrock) to start your journey toward AI-powered innovation.

Visit [docs.anthropic.com](https://docs.anthropic.com) to explore our comprehensive developer documentation and cookbooks to get started building. You can also experience Claude's capabilities firsthand at [console.anthropic.com](https://console.anthropic.com), or connect with our Sales team to discuss your specific needs. The future of AI is evolving rapidly – let's build it together.
